

Bulk Emailer Software

Bulk Emailer Software - a powerful email utility to creating, sending and managing your mailing lists

Our Bulk Emailer Software (YL Mail Man) is a program with built-in email creating, editing and bulk email sending function. the program is not just a secure bulk mailer, with our Bulk Emailer Software you can also manage the customer email addresses with ease. our software provides the multi-level categories and multi-thread email delivering feature.

Our Bulk Emailer Software accepts mailing lists generated in standard txt file. it also can create or edit recipients lists. The number of addresses is unlimited.

Our Bulk Emailer Software is a stand-alone bulk mailer program. All you need to use it is a connection to the Internet. the program has its own internal SMTP server and delivers mail messages directly to email recipients without your ISP mailbox. Our Bulk Emailer Software uses direct multi-thread delivery and ensures 100% usage of your modem. Using standard 56K modem or 64K ISDN connection you are able to send hundreds personal email messages in a minute. (Please note, that many factors can influence on the sending speed, for example, your message's size, the Internet connection speed, your recipients mailboxes availability).

Our Bulk Emailer Software provides easy-to-use mailing list management routines: add new addresses, remove unused addresses, etc. All you need to begin emailing is to start the program, edit or load your recipients mailing list and press "Send Email".
